## NATILUS SMALLCUT PLATE SYSTEM

- Smallcut Locking Plate
- Smallcut Dynamic Plate

Natilus Smallcut plate system is a minimal invasive system. Additionally Natilus Smallcut Plate System is more stable than traditional plate systems. In traditional plate systems the loading is perpendicular to the screws, but in Natilus Smallcut System the loading is less than 90 degrees. That means less bending force at screws and the plate. So early load bearing is available in Natilus Smallcut Plate system

### Features

- Small incision is needed for application
- More stable than traditional plates
- MRI compatibility
- Less bending force on the plate
- Canals in the ends for skin retractor
- Radial anatomic fit
- Site canal - low contact surface combination
- Site canals for multipurpose use
- Unique plate tips for easy application
- Dynamic compression ability
- Locking screw application in locking plates
- Dynamic loading in dynamic plates
- Unique screw tip for self drilling and tapping
- Percutaneous screw application

*Smallcut Incision*

Smallcut means small incision for the application

### Indications

Stabilization of long bones; Femur, tibia, humerus, radius, ulna...

### Contraindications

- Infection
- Severe osteoporotic bone
- Metal sensitivity
- Psychiatric conditions that patient can not cooperate.
